

ANSHUM AWASTHI

Computer Science Engineer | Backend & Full-Stack Developer

Pilibhit, India | +91 8218252750 | anshumawasthiloveindia@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Final-year CS Engineering student and Backend & Full-Stack Developer with hands-on experience building scalable REST APIs, asynchronous processing pipelines, and real-time systems using Node.js, Express.js, React.js, and MongoDB. Delivered production automation workflows during a software development internship and independently engineered multi-tenant, queue-based platforms. Strong foundation in DSA (500+ problems solved), System Design, OOP, and DBMS.

TECHNICAL SKILLS

- **Programming Languages:** C++, JavaScript, SQL, Python
- **Frameworks & Libraries:** React.js, React Native, Next.js, Tailwind CSS, Node.js, Express.js
- **Databases:** MongoDB, MySQL, Redis
- **Backend & Architecture:** REST APIs, RBAC, BullMQ, Socket.IO, Webhooks, Asynchronous Processing, MVC Architecture, Microservices Concepts
- **Tools & Platforms:** Docker, AWS S3, Git, GitHub, Postman, Cloudinary, n8n
- **Core CS Fundamentals:** Data Structures & Algorithms, System Design, Object-Oriented Programming (OOP), Operating Systems, Database Management Systems (DBMS), Computer Networks

WORK EXPERIENCE

Tech & Product Intern, SalesifyMe

Jul 2025 – Jan 2026

Remote (Bhagalpur) | Software Development Internship

- Contributed to frontend and backend systems for a meeting intelligence platform, building features for meeting transcription, AI-powered analysis, and detailed report generation across 3+ core workflows.
- Developed 4+ automation workflows using n8n, integrating REST APIs with Gemini and OpenAI across 3+ product services to automate multi-step business processes.
- Built data processing pipelines with 5+ stages covering data ingestion, transformation, AI analysis, report generation, and automated delivery.
- Improved 10+ workflows and integrations by debugging API issues and refining execution logic, and contributed to 5+ product features spanning API development, testing, and frontend/backend functionality.
- **Technologies:** n8n, REST APIs, Gemini, OpenAI, Node.js, Express, MongoDB, React

PROJECTS

HookSight — Webhook Observability & Delivery Monitoring Platform | [GitHub](#) | [Live Demo](#)

Jul 2026 – Present

- Built a multi-tenant webhook delivery platform with workspace-level RBAC, secure ingestion, asynchronous processing, and real-time monitoring across 5 core resource layers.
- Engineered a Redis + BullMQ delivery pipeline with 5-attempt retries, 2s/4s/8s/16s exponential backoff, delivery tracking, and dead-letter handling.
- Implemented end-to-end webhook observability, tracking events across 6+ lifecycle states from ingestion through retries, failures, and terminal states.
- Developed MongoDB aggregation-based analytics for delivery success, retries, latency, endpoint health, and traffic trends using indexed 24h/7d/30d queries.
- Built a real-time Socket.IO dashboard with search, filtering, pagination (100 results/page), delivery timelines, endpoint health, and retry visualization.
- **Technologies:** Node.js, Express.js, MongoDB, Redis, BullMQ, React.js, Socket.IO, JWT, Tailwind CSS

Multi-Tenant Workspace Management System | [GitHub](#) | [Live Demo](#)

Jan 2026 – May 2026

- Built and deployed a multi-tenant SaaS platform using React, Node.js, Express.js, and MongoDB Atlas, supporting 4+ core modules for workspaces, projects, tasks, and team collaboration.
- Implemented secure authentication and authorization using JWT, httpOnly cookies, and RBAC, supporting 3+ user roles and OTP-based password reset with Nodemailer.
- Architected 15+ RESTful APIs using MVC architecture with middleware-based authorization, input validation, centralized error handling, pagination, and modular service-layer separation.
- Developed 4+ collaboration features including workspace invitations, task assignment, threaded comments, and file uploads using Cloudinary.
- Deployed the application across 2 production environments using Vercel and Render, integrating MongoDB Atlas and configuring environment variables, CORS, and secure cross-origin authentication.
- **Technologies:** React, Node.js, Express.js, MongoDB Atlas

Banking Management System | [GitHub](#)

2026

- Engineered a Node.js, Express.js, and MongoDB banking backend supporting 5+ core operations, including authentication, account management, and fund transfers.
- Implemented ACID-compliant MongoDB transactions for atomic fund transfers, ensuring 100% transaction consistency during concurrent operations.
- Developed 10+ secure RESTful APIs with JWT authentication, protected routes, input validation, and centralized error handling.
- Designed MongoDB schemas for 3+ core entities and structured the backend into 4 modular layers — routes, controllers, services, database — to improve maintainability and testability.
- **Technologies:** Node.js, Express.js, MongoDB

EDUCATION

Indian Institute of Information Technology, Bhagalpur

Jul 2023 – Jun 2027

B.Tech in Computer Science Engineering | CGPA: 7.22

Ben Hur Public School

Jan 2022 – Dec 2022

Senior Secondary (Class XII) | 91%

AWARDS & ACHIEVEMENTS

- Solved 500+ Data Structures and Algorithms problems across LeetCode, GeeksforGeeks, and other coding platforms.
- Achieved a 3-Star rating on CodeChef through consistent participation in rated contests.
- Selected for Round 2 of Smart India Hackathon 2025 for developing an AI-driven public health chatbot for disease awareness.
- Served as a Core Team Member of ENYUGYMA'23, contributing to the organization and execution of the technical fest at IIIT Bhagalpur.
